ABSTRACT OF THE DISCLOSURE

Protocol and system for the automatic and simultaneous distribution of different electronic documents on the Internet between different users in the course of a common session by access to a dedicated server (DS). An organizer user initializes the session, the initialization comprising at least the drawing-up of a list of surnames, first names, and electronic addresses of the invited users, and selects the electronic documents to be distributed. Transmission is effected to the dedicated server. The documents of the list are converted into pages in the unique HTML format. A message of invitation to participate in the session is transmitted from the server to each invited user, the message comprising at least the address of the server, the date, and the time of the session. Access for each of the users to is authorized conditionally.
